AVMSH8
Ig heavy chain V region (HPCG8) - mouse
C.Species: Mus musculus (house mouse)
C.Species: Mus musculus (house mouse)
C.Date: 17-Nov-1995 #sequence_revision 17-Nov-1995 #text_change 09-Jul-2004
C.Accession: E93256
R.Gearlart, P.J.; Johnson, N.D.; Douglas, R.; Hood, L.
Nature 291, 29-34, 1981
A.Title: IgG antibodies to phosphorylcholine exhibit more diversity than their IgM count A;Reference number: A93256, MUID:81197602; PMID:7231520
A.Molecule type: protein
A.Residues: 1-123 -GEA>
A.Molecule type: protein
A.Residues: UNPROT:P01792; UNIPARC:UPI0000027115
A.Mote: the possibility that some of the diversity seen in sequences of phosphorylcholine.
C.Comment: This hybridoma protein binds phosphorylcholine.
C.Comment: This hybridoma protein binds phosphorylcholine.
C.Superfamily: immunoglobulin v region; immunoglobulin homology
C.Keywords: heterotetramer; hybridoma; immunoglobulin homology < IMM>
F:15-100/Domain: immunoglobulin homology < IMM>
F:22-98/Disulfide bonds: #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MISCELLANEOUS: The sequences of 10 hybridoma proteins that also bind dextran differ from that shown at 1-7 positions, many of which occur in the D and J sequents.

-I- MISCELLANEOUS: This protein binds dextran.
-I- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.

Immunol. 141:4012-4019(1988).
-!- MISCELLANEOUS: All those sequence appears to be identical.
-!- MISCELLANEOUS: These chains were isolated from myeloma and hybridoma proteins that bind phosphorylcholine.
-!- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; IPR007110; Ig-1ike.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nature 291:29-34(1981).
--- MISCELLANEOUS: This chain was isolated from a myeloma protein that binds phosphorylcholine.
--- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Rubisco catalyzes two reactions: the carboxylation of Dribulose 1,5-bisphosphate, the primary event in photosynthetic carbon dioxide fixation, as well as the oxidative fragmentation of the pentose substrate in the photorespiration process. Both reactions occur simultaneously and in competition at the same active site (By similarity).

CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + CO(2) + H(2)O = 2 3-phospho-D-glycerate.

CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + O(2) = 3-phospho-D-glycerate + 2-phosphoglycolate.

SUBNIT: 8 large chains + 8 small chains (By similarity).

SUBCELLULAR LOCATION: Chloroplast (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Chloroplast.
